4.2 Quality and importance

Zona montañosa prelitoral situada en la confluencia de las directrices ibérica y bética. De gran interés geológico, geomorfológico y paisajístico, alberga una gran variedad de formaciones vegetales, entre ellas algunas especialmente destacables y ricas en especies endémicas, como las propias de roquedos, los bosques de laurel o los originales alcornoques que prosperan sobre suelos calizos descarbonatados. La diversidad de ambientes presentes condicionan así mismo una importante presencia de especies animales de especial valor; en este sentido, la abundancia de formaciones cársticas -otro de los elementos destacables en la zona-- permite la presencia de numerosas especies de quirópteros.
